### Disclaimer

The coding, coverage, and payment information contained in this document is gathered from various resources and is subject to change without notice. Oculogica cannot guarantee success in obtaining third-party insurance payments. Third-party payment for medical products and services is affected by numerous factors. It is the provider's responsibility to determine and submit appropriate codes, charges, and modifiers for services that are rendered. Providers should contact their third-party payers for specific information on coding, coverage, and payment policies.

### Coding

**PROCEDURE:** The following possible Current Procedural Terminology (CPT) code may be reported when SNAP scan is performed.

| CPT Code | Description                                                                       | Professional Fees                                                                              | Facility Fee                       |
|----------|-----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|------------------------------------|
| 0615T    | Eye movement analysis without spatial calibration, with interpretation and report | Set individually by Medicare Administrative Carriers (MACs) and commercial insurance companies | APC 5734 SI: Q1<br>\$123.02 (HOPD) |

**MODIFIERS:** In general, a modifier is not required. In certain cases, if you do need one follow the guidelines: If billing an office visit and SNAP only, use Modifier 25 and attach to the office visit. If billing an office visit, SNAP and another procedure, use Modifier 59 and attach to the SNAP or other procedure code.

**DIAGNOSIS:** The International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) is the coding system used to report all diagnoses, symptoms and procedures recorded in conjunction with hospital care in the United States. The following possible ICD-10-CM diagnosis codes may describe conditions that are consistent with the FDA labeled indication for EyeBOX SNAP.

| ICD-10 CM Code | Description                                                                         |
|----------------|-------------------------------------------------------------------------------------|
| S06.0X0A       | Concussion without loss of consciousness, initial encounter                         |
| S06.0X0D       | Concussion without loss of consciousness, subsequent encounter                      |
| S06.0X0S       | Concussion without loss of consciousness, sequela                                   |
| S06.0X1A       | Concussion with loss of consciousness of 30 minutes or less, initial encounter      |
| S06.0X1D       | Concussion with loss of consciousness of 30 minutes or less, subsequent encounter   |
| S06.0X1S       | Concussion with loss of consciousness of 30 minutes or less, sequela                |
| S06.0X9A       | Concussion with loss of consciousness of unspecified duration, initial encounter    |
| S06.0X9D       | Concussion with loss of consciousness of unspecified duration, subsequent encounter |
| S06.0X9S       | Concussion with loss of consciousness of unspecified duration, sequela              |

## How do I appeal a denied claim?

It is recommended that you contact the payer to understand the appeal process and the information required for the appeal. You may submit a letter (on the next page is a sample) and supporting literature to appeal a denied claim. In addition, it is recommended that you contact the payer to understand the appeal process and the information required for the appeal. Oculogica also has a reimbursement consultant on call with whom you that you can discuss the appeals process.

Dear (Contact Name):

On (date of service), I performed a concussion assessment using the EyeBOX SNAP® device on the patient. EyeBOX SNAP is an FDA-cleared, non-invasive, baseline-free tool to aid in the diagnosis of concussion. EyeBOX SNAP provides a multi-modal measure (SNAP Score) of concussion, also known as mild traumatic brain injury (mTBI), in patients 15 through 25 years of age in conjunction with clinical assessment. A negative SNAP Score classification corresponds to eye movements and symptom severity that are consistent with a lack of concussion within 3 days of injury. A positive SNAP Score classification corresponds to eye movements and symptom severity that may be present in patients with concussion within 3 days of injury. EyeBOX SNAP provides a set of eye-tracking metrics in relation to a reference database of uninjured individuals. These metrics can be used at any time. This patient presented with (list symptoms that indicated possible concussion.) This patient also has (list any associated symptoms or co-morbidities). (If applicable, include additional information such as alternative diagnostic approaches that have failed and what health problems may have occurred if the patient did not undergo the procedure.) The EyeBOX SNAP indicated (insert results of the test.) As a result of my assessment, (Patient's Name) was/was not diagnosed with concussion.

I am submitting code 0615T, eye movement analysis test without spatial calibration, with interpretation and report and have submitted a charge of \$\_\_\_\_\_ for this procedure. Attached, please find a detailed copy of my operative report, office notes, published articles supporting this procedure and claim form for (patient's name).

**Sincerely,**
